PROJECT DESCRIPTION:

The "Grocery Shop App" is designed to streamline the grocery shopping experience by providing a user-friendly platform for browsing and purchasing items. The app features a splash screen that transitions users into the main interface, which displays various grocery categories, promotional offers, and recently viewed products. Users can browse items by category, view detailed information about selected products including images, descriptions, and prices, and add items to their cart for purchase. The app also includes a search function to quickly find specific products. With its clean and intuitive interface, the "Grocery Shop App" aims to make grocery shopping convenient and efficient, enhancing the overall user experience.

DESCRIPTION OF THE APPLICATION:

The "Grocery Shop App" is a digital platform that allows customers to browse and buy groceries from their mobile devices, with the goal of improving the shopping experience. A flawless user experience is ensured by the app's clear and simple UI. This application also includes '*app icon*'.

Features:

- *Splash Screen:* To greet users and ensure a seamless transition into the main app interface, the app launches with a splash screen.
- *Home Screen:* This is the main activity where you may see different grocery item categories, deals, and products you've recently visited.
- *Product Details:* Customers can see comprehensive details, such as pictures, descriptions, costs, and availability, regarding a chosen selection of products.
- *View by Category:* The app makes it simple to locate product categories by allowing users to browse goods by category.
- *Fonts and Styles:* The app uses preloaded fonts and defined styles to ensure a consistent and visually appealing design.

Emulator used:

Pixel 7a Emulator with API 32(Using this emulator since the Assignment 1)

INSTRUCTIONS FOR HOW TO USE THE APPLICATION:

First Screen:

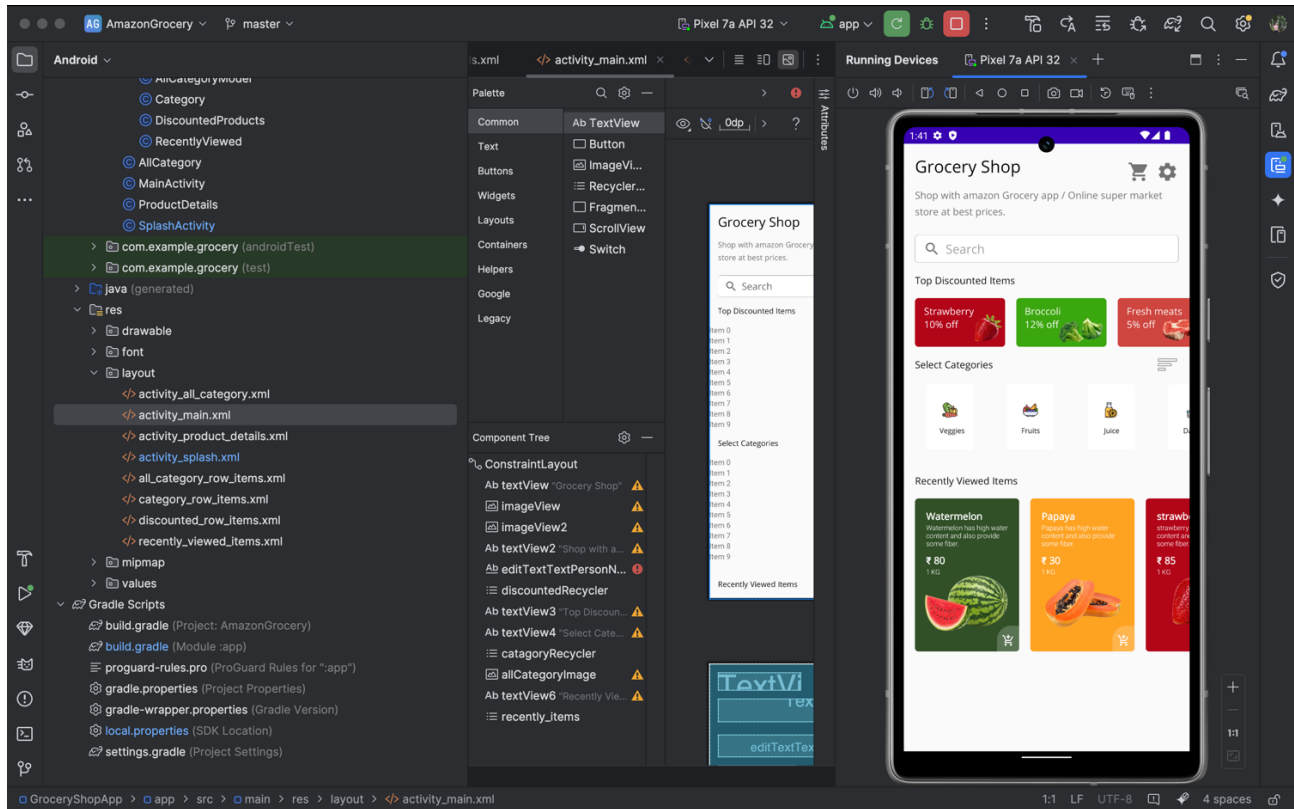

- The program launches and displays the SplashActivity when the user taps the app icon.

- The Splash Activity shows a splash screen with the app's logo and name, providing a brief loading period to enhance user experience.
- During this time, any necessary initializations, such as loading resources or setting up configurations, are performed in the background.

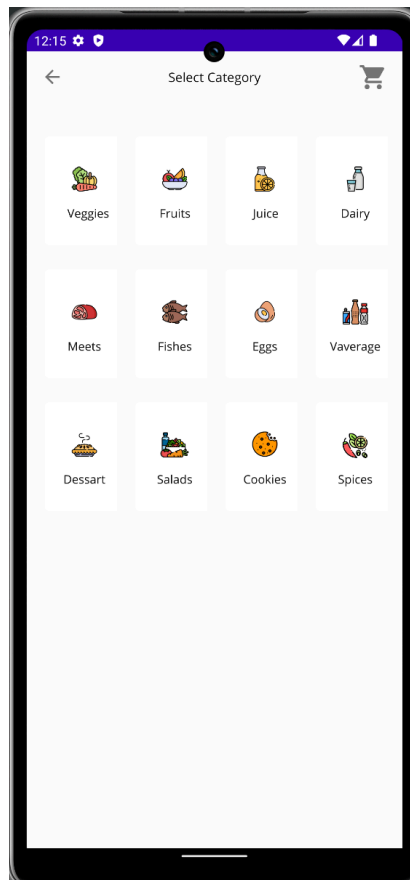

Second Screen:

- After the splash screen, the app transitions to the Main Activity, which serves as the main interface of the app.
- This activity displays the home screen with various categories of grocery items, promotional offers, and recently viewed products.

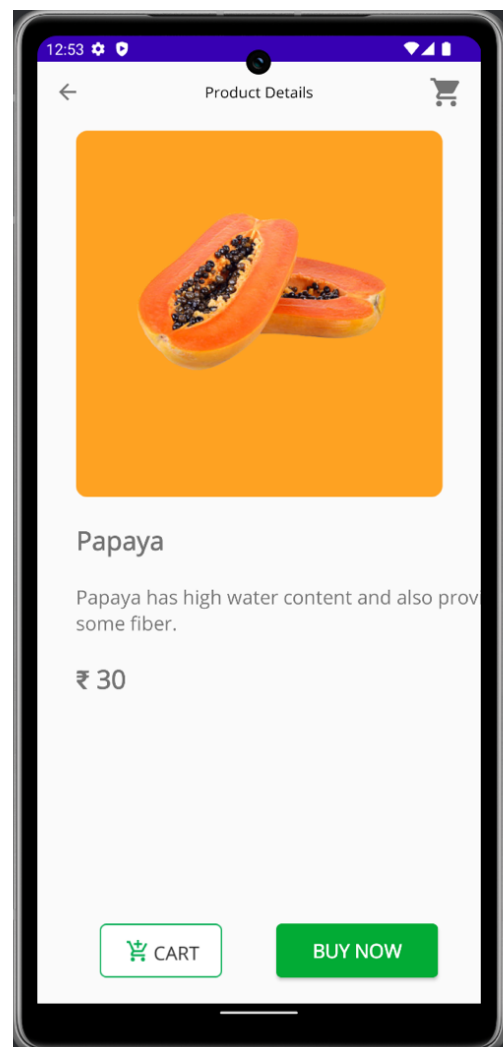

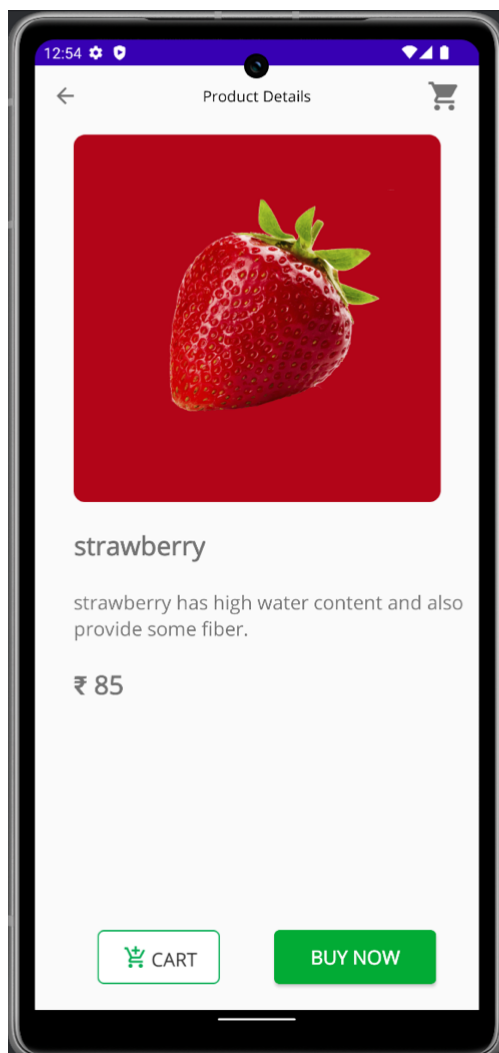

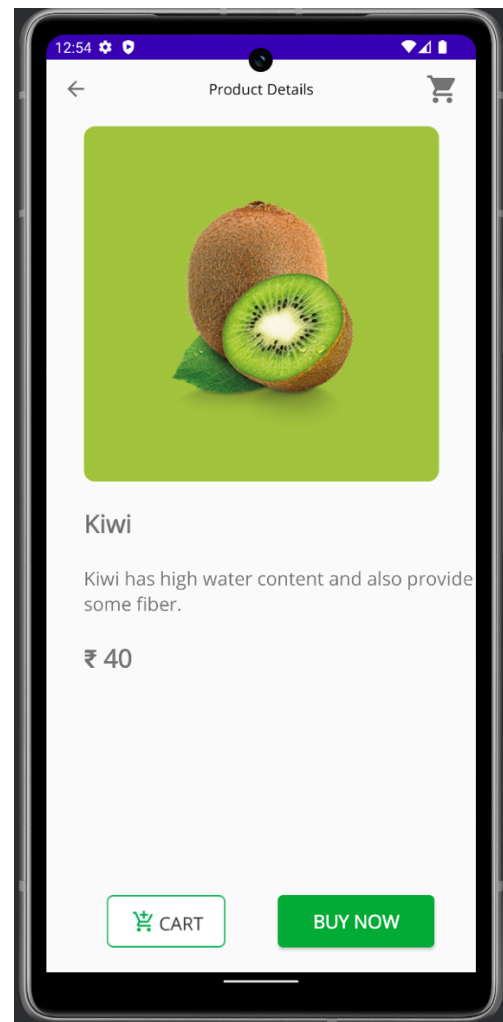

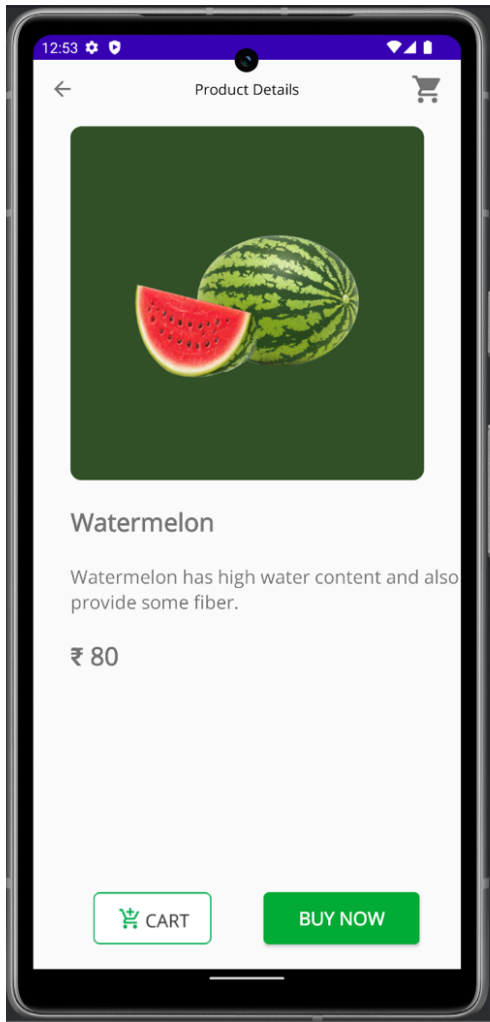

- In this screen you can also scroll through (scroll through the right) the ‘*Top Discounted Items*’, ‘*Select Categories*’ and ‘*Recently Viewed Items*’.

User Interference:

- From the main screen, users can interact with the app by browsing categories, viewing product details, and adding items to their cart.
- The app provides seamless navigation to other screens, such as Product Details for detailed product information and All Category for viewing all categories.
- By selecting the list icon in the "Select Category" section of the Main Activity screen, users can view detailed food items. Users can return to the main screen by clicking on the back icon.
- By clicking the on the each of the item in the Recently viewed section the user is redirected to the product with its description, price and a buy now option (Button). If the user views another item the page is automatically updated to the new item details and its price. The user can view the details of all the item in the recently viewed items.

Project Outcomes:

Through this project I have learnt how to develop an android application from scratch.

I have also implemented new scroll view in this application which was interesting and challenging.
